## **The Application of Passive Defense in Urban and Regional Planning Case Study of Shahriar**

Date received: 4 May 2010

Date accepted: 15 September 2011

### **Abstract**

Discussion about passive defense has a long history especially in construction of urban spaces as well as public buildings. Accuracy of this claim can be found in initial of Islam wars and defensive measures such as digging ditches, and making a fort. Nowadays is felt that considerations of passive defense for reducing casualties of war due to advancement of technology and its impact on the development of WMD should be improved.

A defensive consideration in urban development is most important because of Iran has strategic objectives and strategies such as: authoritarianism, seeking glory, preservation of territorial integrity, political independence, pattern of local development etc. Also considering the passive defense in countries especially in Iran due to their placement in the Middle East and having unique opportunities such as: geopolitical, geostrategic, geo-strategic geo-ideological aspects on the other hand are important.
