Evaluation of Role of Surrounding Areas in Small Cities Development
(Eig Shabestar)

Date received: 8 July 2012  Date accepted: 12 May 2013

Abstract

Popular view of the development in the past ignorant to the distribution of special possibilities and under-constructions in different grounds in proportion with special capabilities of each region has formed present face of central cities. On the other hand, because of the problems such as savings arising from scale of possible attention and presentation of services and possibilities for each one of rural areas is not possible in action that will cause severity of communications between surrounding rural areas with central city for removing economic, social and service necessities. In present research we have tried to determine place and role of
